

Supreme Wheel Spinner Kit Installation Instructions

Thank you for your purchase. Your spinner kit will include spinners, chrome towers, Allen wrench and set screws as shown on the left. Spinners come in three blades as shown and two blades. Please make sure all of your parts were received.

Step 1: Place the Tower over your wheel studs. The Tower has a universal bolt pattern.

Step 2: Shown is a disc brake set-up on the front of a car. Simply slide the Tower onto the matching studs. The Tower should sit flat on your brake drum or disc brake mounting surface. Your studs will align with the corresponding holes in the Tower. Next, you will install your Supreme wheel on top of the Tower.

Step 4: Place your spinner on-top of the Tower. Carefully thread your Set Screws into the holes underneath the blades of the spinners. Tighten the set screws firmly with the provided Allen wrench to prevent the spinner from coming off.

Step 3: This is how the Tower looks after you slide your Supreme wheel over it. The studs will travel through the Tower and your wheel. Install your lug nuts and tighten them to the correct settings.

Completed spinner installation is shown
